SUMMARY

Software Engineer at Amazon with 1+ year of experience in backend services, rules engines, data pipelines and AWS infrastructure. Delivered a global fee-incentive launch across 8 marketplaces; built tooling that cut P0 investigations by ~90%.

EXPERIENCE

Amazon

Software Development Engineer — *Seller Fees & Incentives* Jan 2026 – Present | Bangalore

Java · Python · Drools · AWS (Lambda, CDK, SQS, S3, DynamoDB, Glue, CloudWatch) · SQL data pipelines · React

- Key contributor to the **global launch of a new-seller fee-incentive program** (Jul 2026): 6+ fee benefits across **8 marketplaces** in NA, EU and JP, delivered on schedule for millions of sellers.
- **Led migration of a fee-exemption benefit** from another org into our event-driven discount platform (S3 → SQS → rules engine): new event types, Drools exemption rules, and unit/integration/E2E tests.
- Moved eligibility from SQL batch pipelines into a **rules-based eligibility engine** with **45+ marketplace-specific configs**, shrinking the pipeline to 3 jobs and making eligibility traceable.
- Designed the **zero-overlap cutover** between program versions (cut-off dates across 5 benefits and 2 AWS CDK pipelines) to prevent duplicate discounts; led beta and production UAT with Product.
- Migrated benefit preview and calculation calls to a new **Fee Gateway Service** with no disruption.
- Conceived and built a **Python CLI that automates P0 seller-ticket root-causing**: traces a seller through 4–6 dependent SQL pipeline jobs by streaming multi-GB outputs, pinpoints the filtering condition, and uses an internal LLM to explain it. Cut investigations from **5–6 hours to ~30 min (~90%)**; adopted team-wide.
- Added SEV-3 alarms on critical pipeline jobs (dependency waits, delays, corruption); built an S3 → DynamoDB Glue job and React launch features.

Software Development Engineer — *Alexa Mobile* Jul 2025 – Dec 2025 | Chennai

Java · TypeScript · React · AWS (CDK, Lambda, EC2, IAM, CloudWatch)

- **Led a region migration** of a customer-facing Alexa service out of Dublin: region-agnostic config, IAM roles across 3 AWS accounts, quota sync for **512 EC2 instances**, and replication of **511 AWS resources** via batched Lambda jobs.
- Drove **peak-readiness and security hardening**: timeout alarms, emergency deploy-blocking, staged bake times, Content-Security-Policy headers, and fixes for request-ID injection, log injection and sensitive-data exposure.
- Expanded observability with CloudWatch monitoring for **24 APIs**, low-traffic and certificate-expiry alarms, and code-coverage tracking.
- Fixed user-facing React bugs (React Query caching, reminder display, accessibility) and retired **6 legacy experiments**; shipped 64 changes across 15 packages.

Komplai

Software Development Engineer Intern Jun 2025 | Bangalore

- Shipped full-stack compliance features (Next.js, Prisma, Docker, SQL); automated KYB checks with a company-registry (CIN) API, cutting onboarding time by 30%.

Troywings Technologies

Software Development Engineer Intern Jun 2023 – Dec 2023 | Bangalore

- Raised microservice throughput by 30% with Redis caching and concurrent job queues (Node.js, NGINX); built JWT/bcrypt multi-factor auth.

PROJECTS

Decision Memory | github.com/VamsiKrishnaThota03/decision-memory Atlassian Forge · Rovo · MCP · React

- Jira/Confluence app that captures team decisions and flags work that contradicts them; explainable conflict engine (intent detection, BM25) with 47 tests, exposed as a Rovo AI agent and MCP server.

Haggl | github.com/VamsiKrishnaThota03/haggl Node.js · Gemini API · PayPal

- Agentic-commerce marketplace where AI agents negotiate every price for buyers and sellers within limits enforced in code, with payments settled through PayPal Checkout.

TECHNICAL SKILLS

Languages: Java, Python, JavaScript, TypeScript, SQL, C++, Go

Backend & Data: Node.js, Express, Django, Drools, REST APIs, data pipelines, PostgreSQL, MySQL, MongoDB, Redis

Cloud & DevOps: AWS (Lambda, CDK, DynamoDB, S3, SQS, Glue, CloudWatch, IAM, EC2, STS), Docker, CI/CD, Git

Frontend: React, Next.js, Redux, React Query, Tailwind CSS

EDUCATION

Indian Institute of Information Technology (IIIT), Jabalpur Dec 2021 – May 2025

B.Tech in Computer Science and Engineering CGPA: 8.5 / 10

ACHIEVEMENTS

- Solved **1000+ data structures and algorithms problems** across competitive programming platforms.
